**The additional measures, as set out in section M of the application, to be included as conditions including the following additional condition to manage noise:**

**Noise Management Conditions**

1. The level of noise produced by entertainment held during the event shall not exceed the levels listed in table 1 below, between 18:00 and 23:00, at 1 metre from the façade of any noise sensitive premises in the locality.

**Table 1**

Measurement parameter	Permitted Hours	Façade level (dB)	Free field level (dB)
L Aeq, 15 minutes (")	10:00 – 23:00	65	62
Octave band 31.5Hz (*)	10:00 – 23:00	70	67
Octave band 63 Hz (*)	10:00 – 23:00	70	67
Octave band 125 Hz (*)	10:00 – 23:00	70	67

2. Any sound measurements undertaken to establish compliance with the condition shall follow the guidance contained in British Standard BS 4142:2019.
3. The number of events shall be limited to a maximum of 4 in any 12-month period.
4. No more than two consecutive events shall occur in any 7-day period.

(") The measurement parameter L Aeq is defined as:

The equivalent continuous noise level which at a given location and over a given period of time contains the same A-weighted sound energy as the actual fluctuating noise at the same location over the same period.

(\*) Frequency weighting should not be applied to the octave band measurements. Measurements in the octave band (centre frequencies) 31.5 Hertz, 63 Hertz and 125 Hertz should be linear.

---

Conditions based on the guidance issued within the Code of Practice on Environmental Noise Control at Concerts (Noise Council, 1995).
